PROFESSIONAL SUMMARY

ARCON-certified Cybersecurity Analyst with 2.5 years of hands-on experience delivering Privileged Access Management (PAM) implementations and day-to-day security operations for banking, government and cloud-hosting clients across the UAE and India. Certified at Administrator, Professional and Associate level in ARCON PAM, with two years administering the platform in production. Responsible for end-to-end delivery of deployments covering 2,000+ servers at Abu Dhabi Islamic Bank and 750 endpoint users at MoroHub, spanning password vaulting, just-in-time and time-bound access provisioning, session video logging and rollouts across Production, DR and UAT environments. Experienced in SIEM-based threat monitoring, vulnerability assessment and firewall investigation, with additional certification in MFA, SAML federation, endpoint privilege management, AWS and Oracle Cloud. Currently completing an MSc in Cybersecurity and Machine Learning at the University of Aberdeen and eligible for the UK Graduate Route on completion.

CORE SKILLS

Security Operations: SIEM monitoring and alert triage, threat detection, incident investigation, log analysis, vulnerability assessment, firewall administration, security hardening

Identity & Access Management: ARCON PAM (Administrator / Professional / Associate certified), password vaulting, automated password rotation, just-in-time (one-time), time-bound and permanent access provisioning, privileged session monitoring and video recording, account freeze / suspension controls, PAM connectors, SAML federation, multi-factor authentication (MFA), endpoint privilege management (EPM), converged identity, least-privilege access, RBAC, Active Directory integration

Infrastructure & Cloud: Windows Server, Linux (CentOS), IIS web server, MS-SQL Server, secure gateway / VPN servers, AWS, Oracle Cloud Infrastructure (OCI), high-availability and Disaster Recovery (DR) environments, UAT and production deployment

Programming & Data: Python, SQL / MySQL, C, C++, Power BI, scripting and automation, machine learning fundamentals for security analytics

Frameworks & Practices: NIST Cybersecurity Framework, defence-in-depth, incident response lifecycle, client-facing deployment and documentation, root-cause analysis

PROFESSIONAL EXPERIENCE

Security Analyst — Arcontech Solutions Pvt Ltd

July 2023 – December 2025

Mumbai, Maharashtra, India | Cybersecurity solutions and systems integration

- Responsible for end-to-end delivery of ARCON Privileged Access Management (PAM) for major regional clients including Abu Dhabi Islamic Bank, MoroHub, eHosting DataFort and ADQCC, from installation through go-live and handover across estates of up to 2,000+ servers.
- Managed full-stack ARCON PAM infrastructure end to end: designed and configured MS-SQL databases, deployed and tuned web applications on IIS web servers, and integrated PAM components with Windows Server and Active Directory, including PAM connectors, SAML federation and multi-factor authentication.
- Implemented secure gateway (VPN) servers on CentOS to provide hardened remote access paths into client environments.
- Executed daily Security Operations tasks including continuous threat monitoring, alert triage and in-depth investigation of suspicious activity using SIEM and firewall tooling, escalating and documenting confirmed incidents.
- Performed recurring vulnerability assessments across client infrastructure and worked with system owners to prioritise and validate remediation, reducing exposure on business-critical systems.
- Served as the primary technical point of contact for client stakeholders during deployments, translating security requirements into working configurations and resolving critical issues under tight delivery timelines.
- Produced deployment documentation, configuration runbooks and handover material enabling client teams to operate and support PAM platforms independently.

KEY PROJECTS

Privileged Access Management Deployment — Abu Dhabi Islamic Bank

January 2025 – March 2025

Abu Dhabi, United Arab Emirates | Banking and financial services

- Deployed ARCON PAM across 2,000+ servers for a leading regional bank, implementing the Password Vault and Web Log modules in Production, Disaster Recovery (DR) and User Acceptance Testing (UAT) environments under strict regulatory requirements.
- Configured a tiered privileged access model covering one-time (just-in-time), time-bound and permanent access, with per-server user entitlement mapping and PAM administrator freeze / unfreeze controls to suspend compromised or dormant privileged accounts on demand.
- Enabled automated password rotation and expiry policies with video session logging of privileged activity, producing a tamper-evident audit trail for compliance and incident investigation.
- Configured centralised monitoring dashboards surfacing password rotation and expiry alerts, live privileged session counts and real-time visibility of which servers were being accessed, giving the security team a single operational view of privileged activity.
- Sustained delivery across a three-month phased migration, extended from the original one-month plan to onboard users into the new environment in controlled waves without disrupting banking operations; owned resolution of all critical issues through to full delivery of required system enhancements.

PAM Deployment — MoroHub

2023 – 2025

United Arab Emirates | Cloud and managed hosting services

- Delivered an ARCON PAM implementation covering 750 endpoint users, configuring granular server access entitlements, one-time and time-bound access approvals, and video session logging across the client estate.
- Set up monitoring dashboards tracking password rotation and expiry alerts, active user sessions and accessed servers, enabling the client to audit privileged activity without manual log review.

PAM Rollouts — eHosting DataFort & ADQCC

2023 – 2025

United Arab Emirates | Cloud hosting and government sector

- Delivered PAM implementations for a major cloud service provider and a government entity, covering environment sizing, MS-SQL backend setup, IIS application deployment and post-deployment support.

EDUCATION

MSc Cybersecurity and Machine Learning — University of Aberdeen

Jan 2026 – Expected May 2027

Aberdeen, Scotland, United Kingdom | 16-month programme, completing May 2027

Relevant coursework: applied cryptography, network and systems security, machine learning, secure software, data-driven threat detection and security analytics.

BE Mechatronics Engineering — Ajeenkya DY Patil College, Pune

Aug 2019 – May 2023

Pune, Maharashtra, India | First Class with Honours

Indian School Muscat — CBSE, Science Stream

Apr 2005 – Mar 2019

Muscat, Oman | Grade 12: 71% | Grade 10: 8.0 GPA

CERTIFICATIONS

ARCON PAM (ARCON University): PAM Administrator Certificate (2025) • PAM Professional Certificate (2025) • PAM Associate Certificate (2025)

ARCON Identity Platform: Converged Identity Fundamentals • Multi-Factor Authentication (MFA) • PAM Connectors and SAML • Endpoint Privilege Manager (EPM) • Converged Identity Complete Walkthrough

Security Foundations: Google Cybersecurity Professional Certificate • Ethical Hacking (Cisco) • Introduction to Cybersecurity (Cisco) • Fundamentals of Networking • Introduction to SQL and MySQL Databases

ADDITIONAL INFORMATION

Work Authorisation: UK Student visa with permitted part-time work rights; eligible for the Graduate Route on completion of the MSc. Omani residency and full Indian work history.

Other: Valid Oman driving licence. Available for roles in the UK, UAE and Oman.
